

Integrated Traffic Simulation for Autonomous Driving

Development of a traffic simulation environment for the training of autonomous vehicles under real traffic conditions and for an investigation of their behavior and the resulting effect on the overall system.

Advisors:

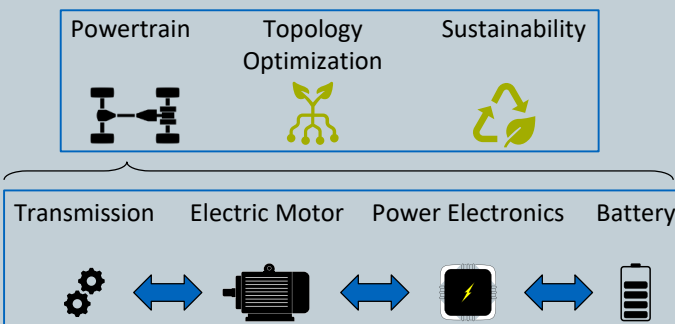

Fabian
Schuhmann

Fabian
Netzler

Parametric Electric Powertrain Model Considering Sustainability

Development of a holistic powertrain system approach. Considering interdependencies in the early stage while aiming to identify crucial vehicle and component parameters with high influence by enhancing the development process with new technologies.

Advisors:

Yasin
Meral

Nico
Rosenberger

When? Oct. 22 – Mar. 23

How? Write your Ba/Sa/Ma/IDP within the project

Benefits?

- Teamwork
- Industry contact
- Fully funded exchange to a partner university
